	Urgent	Not Urgent
Important	**Do - (Your MVP)**	**Schedule - (For V2.0+)**
	● Map, bomb site, and attacking/defending selection. ● Operator bans. (excluding banned operators from recommendations) ● Manual team builder that lets users enter teammates selected operators (exclude too). ● Analyze the team and identify missing roles and overlapping utility. ● Operator recommendation system that ranks available operators based on everything. ● Random balanced five-operator team generator (if 5-stack).	● User interface with operator portraits and interactive maps. ● Save and load favorite team compositions. ● More advanced map specific strategies and site recommendations. ● Operator statistics and updates based on current game balancing updates.

Not Important	Delegate - (Use a library)	Delete - (Cut it)
	● Use Java's ArrayList to organize operators and team data. ● Use Java file reading and writing tools to save and load information. ● Use Java's random num generator for random team selection (depends).	● Integrate into Rainbow Six Siege to detect what teammates are selecting (not possible). ● Online multiplayer or account creation. ● An AI that automatically develops professional level strategies. ● Live and automatic updates from Ubisoft.
